

HUTTIG-GRIP™

FASTENERS

CATALOG

A STRONG FOUNDATION

Woodgrain, Inc. is one of the largest millwork operations in the world, with locations throughout the United States and Chile. Founded in 1954 by Merrill “Bud” Dame, today Woodgrain is a leading producer of mouldings, doors, and windows, as well as a premier distributor of specialty building products.

Headquartered in Fruitland, Idaho, Woodgrain proudly continues Bud’s legacy by remaining family-owned and operated, while making the highest quality wood building products with an unwavering focus on our customers.

Woodgrain continues to grow and to leverage its strength of being vertically integrated. In May of 2022, Woodgrain acquired Huttig Building Products — one of the country’s largest distributors of millwork, building materials, and wood products. Founded in 1865 by brothers Charles and William Huttig, Huttig’s culture and commitment to the industry were a natural fit with Woodgrain.

With the acquisition, Woodgrain offers a coast-to-coast distribution network, with a wide range of value-added products and services. Woodgrain is now positioned to bring unrivaled value to customers and supply partners.

Huttig-Grip Fasteners are now part of the Woodgrain family of brands.

- ▶ Woodgrain’s global supply-chain expertise enhances the robust existing sourcing network
- ▶ Warehouse and direct programs available throughout the expanded national distribution footprint
- ▶ Fasteners, doors, millwork, and building materials all available from your same supplier

BUILT BETTER BY DESIGN

The Huttig-Grip™ fasteners program was developed by a team of industry experts to solve the pain points with existing lines, plus provide a single source for all fastener categories.

The result is the Huttig-Grip Fasteners family of products, encompassing all types and all phase of construction;

- ▶ **HUTTIG-GRIP™** construction fasteners
- ▶ **HUTTIG-GUARD™** exterior screws & stainless steel fasteners
- ▶ **HUTTIG-SPIN™** professional drywall & steel framing screws

Nails & Screws

Designed to work for you and for your customers, the Huttig-Grip program is built around 1 lb. and 5 lb. master cartons having the same width and height, simplifying stocking and merchandising. Nails and screws are also available in buckets and bulk boxes.

Collated Fasteners

Stocking Huttig-Grip collated fasteners allows you to offer the optimal mix for your market, reduce the number of vendors, and streamline the assortment for improved sales and inventory turns.

Stainless Steel

Huttig-Guard stainless steel screws, nails, and collated fasteners round out your fasteners section and ensure that you can meet the requirements in demanding applications.

THE DIFFERENCE IS IN THE DETAILS

MASTER CARTONS

Same-size master cartons simplify and organize your fastener section; easy to merchandise, creates an improved shopping experience.

Easy-tear rip-cord tear from back, no tools required, clean perforation on the carton face

"Fence system" keeps the inner boxes merchandised, on the shelf, without blocking product or information

Same height and width 1 lb. and 5 lb. master cartons are easy to stock, easy to mix, significantly improve shelf appearance

Functional design keeps fasteners contained, preventing loss & theft

- Label seals the box top
- Bottom folds inward, contents keep it closed

- Boxes constructed using microflute material, for same or more strength than the others with less weight.
- Microflute also allows for stronger crease lines for tighter packing with less crushing.

1 & 5 LB. PACKAGES

Labels are thoughtfully designed to lead customers to the general application, then to the type of fastener, and ultimately to the exact nail or screw.

ANATOMY OF THE LABEL

- 1 Vertical banner highlights most common application
- 2 Fastener type and size in large, easy-to-read font
- 3 Actual-size fastener photo shows exactly what is in the box
- 4 Finish icon system makes it easy to spot fastener finish
- 5 Background photo provides application information
- 6 Application in text
- 7 Approximate quantity to purchase what's needed
- 8 Screws icon system quickly identifies key attributes

COMPLETE PROGRAM

HAND DRIVE BULK & COLLATED

Our distinctive, informative, eye-catching approach to packaging is the foundation of our bulk and collated nail programs.

Handle system on bulk nails, bulk screws, and 21° collated nail boxes make them easier to carry **HG**

Standard 10"x10" footprint on bulk nail, screw, and 21° boxes simplifies merchandising and back-stocking

COLLATED FASTENERS

Huttig-Grip collated fasteners work flawlessly with practically every make and model on the market today.

- Framing Nails
- Joist Hanger Nails
- Coil Roofing Nails
- Siding/Fencing Nails
- Medium & Wide Crown Staples
- Narrow Crown & Tacker Staples
- Finish & Brad Nails
- Tub Program also available
- Stainless steel available

COLLATED FINISH & TRIM FASTENERS

- 15 Gauge & 16 Gauge Finish Nails
- 18 Gauge Brad Nails
- Narrow Crown Staples
- Tacker Staples
- 23 Gauge Pin Nails
- Stainless steel available

Available in box or clamshell programs:

- Boxes are easy to merchandise, upright or stacked, to maximize shelf utilization
- Clamshells offer smaller pack quantities for convenience or specialty projects

CONSTRUCTION**

**OUTDOOR
CONSTRUCTION**

ROOFING & SIDING

DRYWALL

GENERAL CONSTRUCTION NAILS

Indoors or environments where fastener will not be directly exposed to moisture or other potentially corrosive conditions. Limited or no resistance to corrosion.

APPLICATIONS

- Finish/Trim
- Framing
- Flooring
- Masonry
- Forming
- Pole Barn

FINISHES

OUTDOOR CONSTRUCTION NAILS & STAPLES

Outdoor applications or where fastener may be exposed to moisture - have additional protection against rust & corrosion.

APPLICATIONS

- Fence/Deck
- Landscaping
- Finish/Trim
- Pole Barn
- Framing
- Poultry Netting

FINISHES

ROOFING & SIDING NAILS

Nails designed for use with specific types of roofing, including asphalt, metal, and tile, and specific types of siding, including aluminum, vinyl, and wood. May or may not have protection against rust & corrosion, depending upon application and finish.

APPLICATIONS

- Roofing
- Exterior Lath/Stucco
- Siding
- Gutters
- Trim

FINISHES

DRYWALL NAILS

Nails for securing gypsum board or for installing lath in preparation for plaster. Limited or no resistance to corrosion.

APPLICATIONS

- Drywall to Wood
- Interior Lath/Plaster

FINISHES

* Length of the nail is measured from beneath the lower head to tip of nail

Product availability varies by location.

Box Nail

For light-duty general construction, carpentry, and box making.

- Relatively thinner shank and sharp point minimize splitting in wood
- Smaller shank and head than common nails of the same length
- Flat head sits flush against surface
- Diamond point
- Conforms to ASTM F1667-17

COLLATED SCREWS

COLLATED FASTENERS

REFERENCE

Product availability varies by location.

Make the right choice for outdoor projects, choose Huttig-Grip galvanized nails.

Huttig-Grip Hot Galvanized and Outdoor Galvanized Nails - Two Solutions to the Same Problems

- ✓ **Extend the life of your outdoor project.**
- ✓ **Minimize staining and "bleeding" from rusting nails.**
- ✓ **Use Huttig-Grip galvanized nails for extra protection against rust and corrosion.**

Steel nails can be compromised by moisture, chemicals in the wood (naturally occurring or treated), and other factors. Coatings and other finishes can be applied for additional protection against corrosion and rust.

HUTTIG-GRIP HOT GALVANIZED NAILS & OUTDOOR GALVANIZED NAILS

- Are recommended for outdoor applications and with treated lumber
- Meet or exceed ASTM A153 Class D requirements for galvanization
- Last longer than non-galvanized nails, extending the life of your project!

OUTDOOR GALVANIZED

- Recommended for outdoor applications and with treated lumber
- Meet or exceed ASTM A153 Class D requirements
- Smoother finish than HG
- Outperforms HG in ASTM B117-compliant salt spray testing (evaluates approximate lifespan)

HOT GALVANIZED

- Recommended for outdoor applications and with treated lumber
- Meet or exceed ASTM A153 Class D requirements
- Nails or the wire used to make nails may be tumbled or dipped in hot, molten zinc

Huttig-Grip galvanized nails availability varies by market preference; hot galvanized or outdoor galvanized might not be stocked in all areas. Visit huttig-grip.com/warranty for complete limited fastener warranty details.

Product availability varies by location.

 OUTDOOR GALVANIZED		 HOT GALVANIZED	
OG Outdoor Galvanization is an alternative to HG Hot Galvanization with equal or better corrosion resistance.		HG Hot Galvanization is a traditional process to provide additional protection against corrosive environments and materials.	
ASTM Compliance & Testing			
OG coating thickness is equal to or better than ASTM A153D specifications.		HG coating thickness is equal to or better than ASTM A153D specifications.	
OG outperforms HG in a traditional salt spray test performed according to ASTM B117.		---	
Surface			
<ul style="list-style-type: none"> • Smooth, uniform coating for better protection • Reduces tool jamming (when applied to collated nails) 		<ul style="list-style-type: none"> • Coating may not always be evenly coated or distributed • Zinc may fill threads on ring or spiral shank nails • Increases the diameter/bulk of the nail 	
Process			
Primarily two methods to produce OG nails:		Primarily two methods to produce HG nails:	
1. Thermal Diffusion Galvanization	2. EG Electro Galvanized Zinc + Organic Top Coat	1. Formed from Galvanized Wire	2. Dipped in Molten Zinc After Nail Formation (Hot Dipped Galvanization)
<ul style="list-style-type: none"> • Nails placed in a cylinder with a dry zinc mixture (zinc/iron), heated, and slowly rotated for several hours (vaporized diffusion process) • Nails are then cleaned and passivated, and dried 	<ul style="list-style-type: none"> • Nails are first electro galvanized • Electro galvanized nails then painted with an organic coating and baked twice • Organic coating behaves as a barrier between the zinc on the nail and corrosive materials such as the chemicals in treated lumber 	<ul style="list-style-type: none"> • Carbon steel used to manufacture nails is passed through a tank of molten zinc • The galvanized wire is then used to form nails (most often used for collated nails) 	<ul style="list-style-type: none"> • Nails are formed from bright carbon steel wire • The formed nails are then dipped twice in molten zinc (more common for hand drive versus collated nails)
Coating is harder than that of other zinc coatings	—	Zinc coating is softer than zinc/iron OG coating	
Thermal Diffusion Galvanization <ul style="list-style-type: none"> • Minimal waste • Acid-free cleaning • Environmentally-friendly process 	—	Molten Zinc <ul style="list-style-type: none"> • Process creates significant waste streams • Acid-pickling (used to prepare the nails after galvanization) is harmful to environment 	

HUTTIG-GUARD STAINLESS STEEL NAILS

For the ultimate protection against corrosion, choose HUTTIG-GUARD stainless steel nails. Backed by a limited lifetime fastener warranty, HUTTIG-GUARD stainless steel nails are recommended for outdoor applications and with treated lumber, cedar, and redwood. Use HUTTIG-GUARD Grade 316 Stainless Steel nails in marine environments.

Product availability varies by location.

Deck Nail

For deck, patio, fence, and other outdoor construction.

- Flat head seats flush against surface
- Diamond point
- Ring shank for use in softer woods and where vibration may be a factor
- Spiral shank for use with harder woods and near board ends to minimize splitting

Available Finishes

Ring shank depicted, spiral shank also available

Box Nail

For light-duty general construction, carpentry, and box making.

- Relatively thinner shank and sharp point minimize splitting in wood
- Smaller shank and head than common nails of the same length
- Flat head sits flush against surface
- Diamond point
- Conforms to ASTM F1667-17

Drywall Nail - Cupped Head

For attaching sheets of drywall to wood studs.

- Cupped head sinks into surface, accepts joint compound
- Slightly heavier shank than standard drywall nails
- Smooth shank and long diamond point reduces tearing of drywall paper
- Phosphate coating reduces friction, binds with joint compounds and paint
- Conforms to ASTM C514

WOOD & EXTERIOR SCREWS

DRYWALL & STEEL SCREWS

COLLATED SCREWS

COLLATED FASTENERS

REFERENCE

Product availability varies by location.

HUTTIG-GRIP™ & HUTTIG-GUARD™ WOOD SCREWS

All Huttig-Guard and Huttig-Grip wood screws are designed to provide superior penetration, grip and strength—all while reducing effort, head-pops, breaks and splitting.

HEAD

Huttig-Grip All Purpose and Huttig-Guard outdoor screws have flat heads with nibs, while others use bugle heads.

- Flat head -
 - designed for use with wood; bugle head is best for drywall applications, tucks drywall paper under the head
 - dramatically reduces head pops when driving fasteners into wood; bugle head intended to sink into softer materials, prone to breaking especially when used with harder woods
- Nibs help to “seat” the head into wood for flat, smooth installation surface
- **HUTTIG-GUARD Platinum Outdoor Screws feature a Double Countersink Flat head with Nibs** for ultimate seating in wood

FLAT HEAD WITH NIBS

DOUBLE COUNTERSINK FLAT HEAD WITH NIBS

DRIVE

Huttig-Grip All Purpose and Huttig-Guard screws have a star drive versus Phillips.

- Star drive is a “positive” drive; keeps driving tool in place, even with high torque
- 12-point contact with bit
- Eliminates head spin outs
- FREE star drive bit with all Huttig-Guard screws

STAR DRIVE

THREAD

Huttig-Grip All Purpose and Huttig-Guard wood screws have coarse, serrated thread.*

- Serrated threads reduce the torque needed to drive the screw without reducing holding power

*Huttig-Guard Stainless Steel screws are coarse thread.

COARSE SERRATED THREAD

KNURLED SHANK

- **HUTTIG-GUARD Platinum Outdoor Screws feature a knurled shank;** reams hole in board reducing drag on shank & driving tool for faster, easier penetration

KNURLED SHANK

POINT

Huttig-Grip All Purpose and Huttig-Guard screws have a Type 17 point versus standard sharp point.

- Type 17 point was originally designed for the hardwood wood-working industry
- “Drills” through wood; penetrates some of the hardest woods faster, eliminates splitting at board ends
- Quickly starts wood penetration without “walking”; also cuts wood fibers when driving for faster initial installation times

HUTTIG-GUARD Platinum Screws feature a Type 17 Long point for even faster, easier penetration

- Designed for use with thicker pieces of hardwood where more material will be displaced, fluting helps to move chips out of the hole

TYPE 17 POINT

TYPE 17 LONG POINT

GAUGE

Huttig-Grip All Purpose and Huttig-Guard wood screws are made of heavy gauge wire.

- Superior holding power
- Eliminates head pops and screws breaking during drilling

Product availability varies by location.

Fast. Easy. Reliable.

HUTTIG-GRIP™ ALL-PURPOSE WOOD SCREWS

12-point star drive for better engagement

Countersinking flat head with nibs for fewer head pops and a smoother finish

Coarse serrated thread reduces torque needed to drive screw without reducing holding power

Type 17 point drills through wood, eliminates splits; fluting moves chips out of the hole

Yellow Zinc Plated for clean, shiny finished project

Huttig-Grip™ All-Purpose Screws provide superior penetration, grip and strength all while reducing effort, head-pops, breaks and splitting.

Designed specifically for use with wood, the drive, head, thread, and point all work together for faster, easier installation.

Plus, these screws are made from heavy-gauge wire, which means less breakage during installation and stronger, longer holding power.

Huttig-Grip All-Purpose Screws save time and reduce waste on the jobsite and for DIY projects.

HUTTIG-GRIP™

* NOTE: Knurled shank not available on 1-1/4" screws

Product availability varies by location.

Platinum Trim Screw

For attaching deck boards, railings, and trim.

- 12-point star drive for better engagement, more torque
- Relatively small head, sinks beneath the surface for low visibility.
Nibs help to “seat” the head into the hole. Coarse, serrated thread uses less torque to cut through wood
- Knurled shank for reduced drag, faster, easier penetration
- Type 17 long point designed for use with thicker pieces of hardwood
- Limited Lifetime Fastener Warranty. See www.huttig-grip.com/warranty for complete details

Product availability varies by location.

Premium Composite Deck Screw

For attaching composite decking to deck frame.

- 12-point star drive for better engagement, more torque
- Mushroom head not much larger than shank, designed to sink to the hole, trapping material beneath, eliminating head pop-ups on deck surface
- Triple-thread design traps material within the hole, away from surface
- Type 17 point designed for use with dense, harder materials, eliminates splitting at end of boards
- Limited 50 year fastener warranty. See www.huttig-grip.com/warranty for complete details

HUTTIG-SPIN™ Commercial Fasteners

Designed for use with drywall & steel framing

Color coded packaging help guide you to the five main categories by application.

DRYWALL

LIGHT GAUGE STEEL

HEAVY GAUGE STEEL

CEMENT &
FIBER CEMENT

WOOD

DRYWALL-TO-WOOD SCREWS

Coarse thread, sharp point commonly used when attaching gypsum board to wood or gypsum board to gypsum board. Limited or no resistance to corrosion.

STYLES

- Drywall Screw - Coarse Thread
- Laminating Screw

FINISH

LIGHT GAUGE STEEL SCREWS

Fine thread, sharp point commonly used when attaching “soft” materials to wood or to light-gauge steel, such as wood trim to light-gauge steel stud. Limited or no resistance to corrosion.

STYLES

- Drywall Screw - Fine Thread
- Modified Truss Screw
- Pan Framer Screw
- Phillips Wafer Head Screw
- Slotted Hex Washer Head Screw
- Trim Screw

FINISHES

HEAVY GAUGE STEEL SCREWS

Fine thread, self-drill used when working with harder materials, including metal, and/or attaching to heavier-gauge steel. Limited or no resistance to corrosion.

STYLES

- Drywall Screw - Self-drill
- Eye Lag Screw
- Hex Washer Head Screw
- Modified Truss Screw
- Pan Framer Screw
- Pan Head Screw
- Phillips Wafer Head Screw
- Trim Screw

FINISHES

CEMENT & FIBER CEMENT SCREWS

Spade point used when attaching cement board to wood or to light-gauge steel studs.

Self-drill used for attaching cement or fiber cement boards to heavier-gauge steel studs.

Lifetime limited fastener warranty. Visit huttig.com/warranty for complete limited fastener warranty details.

STYLES

- Cement Board Screw - Wafer Head with Nibs Self-drill
- Cement Board Screw - Wafer Head with Nibs Spade Point
- Fiber Cement Board Screw - Flat Head Self-drill with Wings

FINISH

WOOD FASTENERS

Sharp point for attaching to wood or other “soft” materials. Limited or no resistance to corrosion.

STYLE

- Eye Lag Screw

HUTTIG-SPIN[™] FASTENERS

Drywall & Steel Framing Screws Designed for the Construction Professional

Sourcing:

- Produced only in approved mills in Taiwan
- All packaging has mill and production codes for traceability

Testing:

- Conducted on all products
- Detailed process, includes sampling during production, plus pre-shipment full inspection report on every batch

Product specifications:

- Developed to meet or exceed industry expectations, based upon extensive testing of competitive brands including Grabber, Pro-Twist, Hilti, and ITW Buildex.
- ASTM: All screws are made from C1022 wire

Product identifier: "HS" head stamp for easy identification and streamlined inspections

Complete product mix, bulk & packaged programs

- Drywall Screws – coarse & fine thread
- Drywall Screws – bugle head self-drill
- Laminator Screws
- Modified Truss Screws
- Pan Framer Screws
- Pan Head Screws
- Hex & Slotted Hex Washer Head Screws
- Cement & Fiber Cement Board Screws
- Trim Screws
- Phillips Wafer Head Screws

Packaging is color-coded by application = easy product identification

Eye Lag Screw

For attaching wire to wood joists for suspended ceiling grid.

- Coarse thread for use with wood

Length	Hole Size	Approx. count / lb.	300 pc. Box 12 / master	Bulk Box	Box Quantity
BRIGHT					
3"	1/4"	47	HSP3LAGEYE100	HSP3LAGEYE1M	1,000

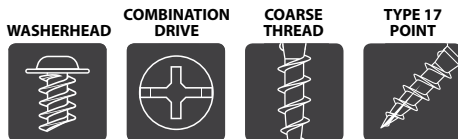

Available Finish

Particle Board Screw

For use with particle board and other low-density or softer woods.

- Wide head holds material in place, low profile for use with low clearance and/or minimized appearance

Length	Gauge	Head	Drive	Point	Approx. count / lb.	Bulk Box	Box Quantity
ZINC PLATED							
1-1/2"	8.000	Washer	Combination	Type 17	—	HSP112PTBWC5M	5,000

Available Finish

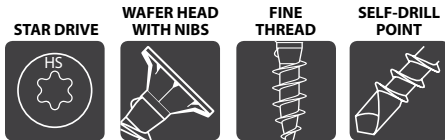

Product availability varies by location.

Cement Board Screw - Self-Drill

For attaching cement board to heavy-gauge steel studs.

- Flat head sits flush, nibs help to "seat" head in surface
- Self-drill point, fine thread for use with steel
- Limited 50 year fastener warranty. See www.huttig-grip.com/warranty for complete details.

Available Finish

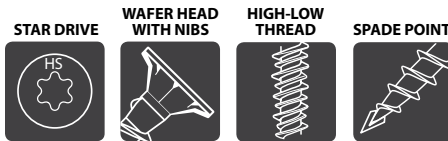

Length x Gauge	Drive	Point	Approx. count / lb.	1 lb. Box 12 / master	5 lb. Box 5 / master	Bulk Box	Box Quantity
PREMIUM 50 YEAR FINISH

2-1/4" x 8	T-20 Star	Self-drill	100	—	—	HSPQ214CBNB3M	3,000

Cement Board Screw - Spade Point

For attaching cement board to wood or to light-gauge steel studs.

- Flat head sits flush, nibs help to "seat" head in surface
- Spade point bores through cement board without cracking
- High-low thread for easier drilling with greater pull-out resistance
- Limited 50 year fastener warranty. See www.huttig-grip.com/warranty for complete details.

Available Finish

Length x Gauge	Drive	Point	Approx. count / lb.	1 lb. Box 12 / master	5 lb. Box 5 / master	Bulk Box	Box Quantity

Product availability varies by location.

HUTTIG-SPIN Collated Screws

Collated screw systems increase efficiency on the jobsite and reduce strain on installers by providing a faster, easier way to attach drywall (including ceilings), subfloors, and deck boards.

Designed to fit auto-feed screwdrivers from Grabber, Hitachi, Milwaukee, Muro, Ridgid, Ryobi, Senco, and others.

Manufactured with Quality & Compliance

- Produced in approved mills in Taiwan
- Detailed testing protocol in place
 - Sampling during production
 - Pre-shipment full inspection report on every batch
- Product Identifier: "HS" head stamp for verification
- Every pail stamped with mill and production code for traceability
- All screws are made from C1022 wire

Color-coded packaging identifies finishes and applications

Product availability varies by location.

Subfloor Screw

For attaching plywood and OSB subfloor to floor joists.

- Flat, countersink head with nibs for fewer head pops, smoother finish
- Coarse, serrated thread cuts through wood using less torque
- Sharp point, coarse thread for use with wood

Available Finish

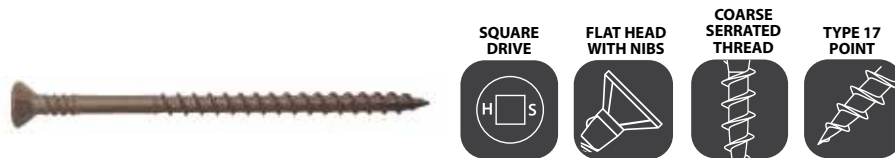

Length x Gauge	Drive	Point	Pail SKU	Pcs
YELLOW ZINC				
1-3/4" x 8	#2 Square	Sharp	HSPC134SF1MP	1,000

Premium Outdoor Screw

For deck, patio, and outdoor construction.

- Flat head sits flush. Nibs help to pull material from the hole, and to "seat" the head for smoother finished surface.
- Coarse, serrated thread cuts through wood using less torque
- Type 17 point drills own hole, easier to drive into hardwoods
- Limited 50 year fastener warranty. See www.huttig-grip.com/warranty for complete details

30d 4	-1/2"	11.4 cm
40d 5	"	12.7 cm
50d 5	-1/2"	13.9 cm
60d 6	"	15.2 cm
70d 7	"	17.7 cm

PENNY SIZE

The symbol "d" or "D" is used to identify the size of many types of nails. For example, a 3" box nail is also known as a 10 penny (10d) box nail.

History

The denarius was a coin used as currency by the Romans throughout their empire. In Britain, over time, the Roman denarius transitioned to the British penny, with "d/D" (for denarius) living on as the abbreviation for "penny".

Nails were once identified by how many pennies it would cost to purchase 100 nails of that size from a blacksmith. 100 of a smaller nail (4d) would cost less than 100 of a larger nail (16d) and vice versa.

Today, we also identify nails with specific length and gauge, but the term "penny" and "d/D" symbol are still commonly used.

Penny size is typically used for construction nails longer than 2 in.

FINISH ICONS & EXPLANATIONS

	FINISH INFORMATION	DESCRIPTION	RECOMMENDATIONS	
CONSTRUCTION FASTENERS	<p>Bright</p> 	Plain, "bright" steel without any additional protection against corrosion.	Not recommended for outdoor applications or where moisture may be present.	
	<p>Blued</p> 	Exposed to heat for "sterilization", which creates the blue appearance.	Most commonly used on lath or other relatively small nails, which at one time were often held in the mouth prior to nailing.	Not recommended for outdoor applications or where moisture may be present.
WOOD & EXTERIOR SCREWS	<p>Vinyl Coated</p> 	Nail dipped in vinyl; vinyl heats as nail is driven into wood for easier driving, provides nominal enhanced holding power when cools.	Vinyl coating does not provide protection against corrosion.	Not recommended for outdoor applications or where moisture may be present.
	<p>Phosphate Coated</p> 	Iron phosphate coating created on the surface of the fastener to enhance adhesion of paint and other finishes (drywall compound).	Phosphate coating provides minimal protection against corrosion.	Not recommended for outdoor applications or where moisture may be present.
DRYWALL & STEEL SCREWS	<p>Zinc Plated / Yellow Zinc Plated</p> 	Clear or yellow zinc coating applied to fastener; smooth, shiny finish.	Zinc plating provides minimal protection against corrosion.	Not recommended for outdoor applications or where moisture may be present.
	<p>Electro Galvanized</p> 	Zinc plating bonded to steel with electrical charges; smooth, shiny finish.	Electro galvanization provides moderate protection against corrosion.	Recommended for outdoor applications excluding treated lumber.
COLLATED SCREWS	<p>Hot Galvanized</p> 	Hot zinc applied to fastener for thicker, more durable coating; rougher, sometimes darker finish.	Hot galvanization provides significant protection against corrosion.	Recommended for outdoor applications and with treated lumber.
	<p>Outdoor Galvanized</p> 	Multi-step process; zinc applied to fastener followed by a variety of methods to harden the coating for additional protection.	Outdoor galvanization provides significant protection against corrosion, equal to or better than hot galvanization.	Recommended for outdoor applications and with treated lumber.
COLLATED FASTENERS	<p>Copper</p> 	Copper is anti-corrosive by nature; known for durability and longevity. Develops attractive patina with age.	Commonly used with roofing tiles and slates, copper roofs and gutters; can also be used with treated lumber.	Not recommended for use with aluminum flashing or other aluminum materials due to corrosive reaction.
	REFERENCE	<p>Aluminum / Painted Aluminum</p> 	Inherently resistant to corrosion, lighter than comparable steel nails.	Used with aluminum flashing, gutters, siding, and screening.

FINISH ICONS & EXPLANATIONS

FINISH		RECOMMENDATIONS
Premium Limited 50 Year Warranty 	Limited 50 year fastener warranty.	Recommended for outdoor applications and with treated lumber.
Platinum Limited Lifetime Warranty 	Limited lifetime fastener warranty.	Recommended for outdoor applications and with treated lumber.
Stainless Steel 304 Limited Lifetime Warranty 	Limited lifetime fastener warranty.	Recommended for outdoor applications and with treated lumber, cedar, and redwood.
Stainless Steel 305 Limited Lifetime Warranty 	Limited lifetime fastener warranty.	Recommended for outdoor applications and with treated lumber, cedar, and redwood.
Stainless Steel 316 Limited Lifetime Warranty 	Limited lifetime fastener warranty.	Recommended for outdoor applications and with treated lumber, cedar, redwood, and marine

COMMON CONSTRUCTION SCREW ATTRIBUTES

DRIVE

PHILLIPS DRIVE

Cross-shaped recess designed to cam-out (bit slips out of the drive) before being overdriven, preventing screws breaking from too much torque.

SQUARE DRIVE

Bit fits into screw head, less likely to slip out. Screw stays on the bit, easier for one-handed fastening.

STAR DRIVE

“Positive” drive; keeps driving tool in place, even with high torque. Eliminates head spinouts.

SLOT DRIVE

Most basic drive style. Not recommended for use with power tools or with high torque.

HEAD

BUGLE HEAD

Used with drywall and softer woods where head can sink just below surface, holding material beneath. Rounded edges, sloping neck prevent tearing of material.

COUNTERSINK FLAT HEAD

Used with wood, cement board, and other similar materials. Flat head sits flush.

COUNTERSINK FLAT HEAD WITH NIBS

Used with wood, cement board, and other similar materials. Flat head sits flush. Nibs help to pull material from the hole, and to “seat” the head for smoother finished surface.

DOUBLE COUNTERSINK FLAT HEAD WITH NIBS

Used with wood, cement board, and other similar materials. Double countersink flat head sits flush without pre-drilling hole. Twice as many nibs to help to pull material from the hole, and to “seat” the head for smoother finished surface.

TRIM HEAD

Relatively small head, roughly same size as finish nail head. Sinks beneath the surface for low visibility.

TRIM HEAD WITH NIBS

Relatively small head, roughly same size as finish nail head. Sinks beneath the surface for low visibility. Nibs help to “seat” the head into the hole.

PAN HEAD

For high-torque installations into wood or metal. Lower profile than oval or round screws, with a flat or slightly rounded top and vertical edges.

MUSHROOM HEAD

Common on screws used with composite lumber. Head not much larger than shank; designed to sink into the hole, trapping material beneath.

MODIFIED TRUSS / WASHER HEAD

Larger head diameter for holding material in place, low profile for applications with minimal clearance and/or minimized appearance.

WAFER HEAD

Used with wood, cement board, and other similar materials. Flat, wider head sits flush while providing expanded bearing surface.

WAFER HEAD WITH NIBS

Used with wood, cement board, and other similar materials. Flat, wider head sits flush while providing expanded bearing surface. Nibs help to “seat” the head for smoother finish.

HEX WASHER HEAD

Hex head is preferred for high-volume projects; relatively easy to engage, tighten, and loosen, supports more tightening torque than other head styles. Metal flange at base of head provides pull-through resistance.

SLOTTED HEX WASHER HEAD

Benefits of hex washer head, plus can also be driven with a standard/flat-blade screwdriver or bit.

HEX HEAD WITH NEOPRENE WASHER

Benefits of hex head, plus neoprene-bonded washer provides seal against moisture.

THREAD

COARSE THREAD

Used with wood, cement board, and other similar materials. Coarse thread accepts more material between threads and is forgiving; more likely to drill and hold even if slightly dinged or otherwise blemished.

HIGH-LOW THREAD

Used with low-density materials such as cement board. Thread design reduces the amount of required torque, reduces cracking, and has greater pull-out resistance.

TRIPLE THREAD

Common on screws used with composite lumber. Traps material within the hole, away from the surface. Useful with softer materials including composites and vinyl.

FINE THREAD

Used with attaching to steel and other metals and thin pieces of wood. Threads are finer, closer together, more precise; necessary when working with thinner and/or more brittle materials. Greater holding power compared to coarse thread.

POINT

SHARP POINT

Used when fastening to wood and other medium to soft materials. May require drilling of pilot point.

TYPE 17 POINT

Used when fastening to wood, especially denser, harder woods. Flute in point helps to draw material out of the hole.

SELF-DRILL POINT

Used when fastening to steel, other types of metal, and thin pieces of wood. Drills own pilot point into medium to heavy steel.

SPADE POINT

Used to quickly bore holes through wood and similar materials.

COLLATED FASTENER / TOOL COMPATIBILITY GUIDE

Woodgrain Limited Warranty for Huttig-Guard Professional, Premium, Platinum, or Stainless Steel Fasteners

What Does This Warranty Cover?

This limited warranty applies to the first retail purchaser of Huttig-Guard Professional, Premium, Platinum, or Stainless Steel fasteners (also referred to herein as the "Fasteners"). Woodgrain warrants that such fasteners will be free from any defects in material and workmanship for the specified warranty period for the original project for which it was installed when used in accordance with the recommendations listed in the Huttig-Grip Fasteners Catalog or elsewhere by Woodgrain. Please note that all metal fasteners have the potential to corrode. There are no warranties (including any of warranty of merchantability) that extend beyond the foregoing and such warranty applies to Huttig-Guard Professional, Premium, Platinum, or Stainless Steel fasteners only.

Who Is Entitled to the Warranty and How Long Does The Coverage Last?

This warranty is granted to the first retail purchaser only, is not transferable and lasts for the product specified warranty period for the project for which it was originally installed.

What Will Woodgrain Do?

Woodgrain will replace the defective Huttig-Guard Professional, Premium, Platinum, or Stainless Steel fasteners with like or equivalent product. Any labor for installation, removal or other material charges are not covered by this limited fastener warranty.

What Does This Warranty Not Cover?

- This warranty does not cover issues caused by:
- Any defect due to environmental conditions or inadequate or improper handling, transportation, storage or maintenance,
- Failure or damage caused by improper installation (including chipped coating during installation), application, improper preparation, the building site, any 3rd party products, inadequate structure design, reuse or reinstallation of the fastener,
- Failure or damage caused by wood destroying insects, animals, wood fungus, mold, mildew, exposure to chemicals or other hazardous substances, a corrosive environment or materials, standing water, or premature deterioration of building materials,
- Failure or damage used in a structure that does not comply with all local, state and federal building codes, laws, rules and regulations,
- Use of fasteners in extreme temperatures or extreme environmental conditions,
- Fasteners subjected to negligence, excessive or improper use, willful misconduct, actions or inactions by the installer (general contractors, owners, 3rd party builders),
- Wear or damage due to traffic involving motorized vehicles.

Woodgrain's liability is limited to the replacement of the defective product only except in the event replacement of the product is not available, then a refund of the purchase price of the defective product.

How Do You File A Claim?

If the performance of Huttig-Guard fasteners does not meet the stated limited warranty, the original purchaser must contact

Woodgrain to initiate a claim. Please use the Defective Product Warranty Claim Form found at <https://huttig-grip.com/warranty>.

Information required for claim:

Customer Information:

First Name, Last Name
Street Address, City, State, Zip
E-mail address
Telephone number

Product Information & Claim Details:

Purchase Date
Purchase Receipt
Product Name, including Color
Quantity Purchased
Quantity Defective
Date Installed
Where Installed (back yard, pool area, et cetera)
Application (fence, deck, et cetera)

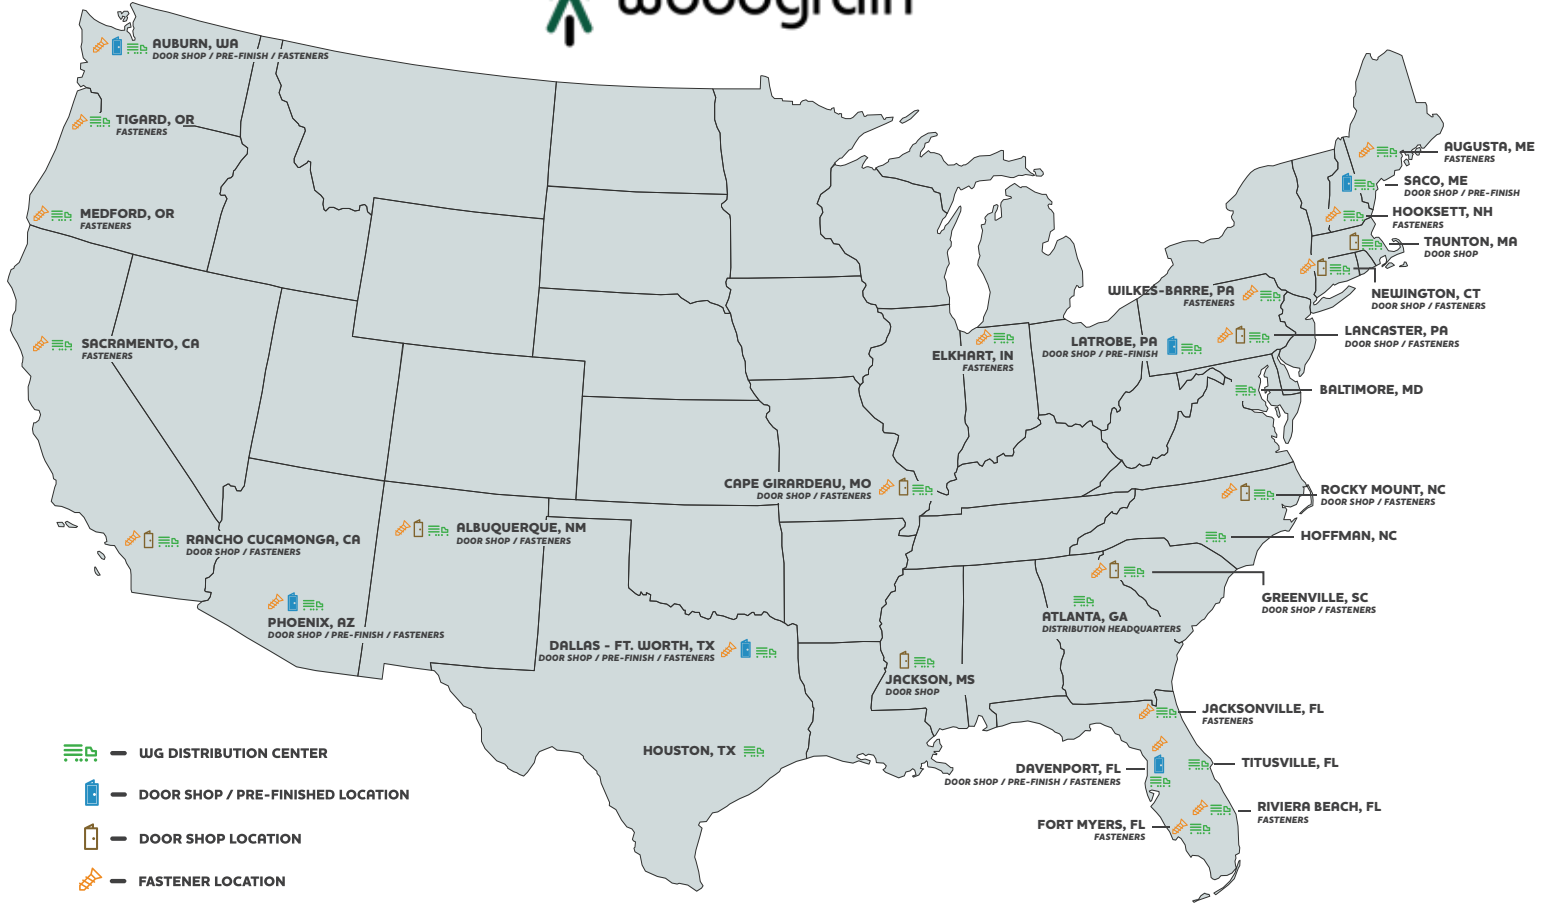

Include photos of structure and defective product along with original box and receipt.

Initiate claim by email at warranty@woodgrain.com or by mail:

Woodgrain
ATTN: TQMP
555 Maryville University Drive
Suite 400
St. Louis, MO 63141

This warranty is subject to revision without notice.

THIS WRITING CONTAINS THE ENTIRE AGREEMENT BETWEEN WOODGRAIN AND THE CONSUMER PURCHASER. ALL WARRANTIES, WHETHER EXPRESSED OR IMPLIED, WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE EXCLUDED EXCEPT AS OTHERWISE SPECIFICALLY SET FORTH HEREIN. WOODGRAIN'S LIABILITY IS LIMITED TO THE PURCHASE PRICE OF THE DEFECTIVE PRODUCT. IN NO EVENT ARE CONSEQUENTIAL OR INCIDENTAL DAMAGES RECOVERABLE UNDER THIS WARRANTY.
